Dmatrix() — Duplication matrix

Description Syntax Remarks and examples Conformability
Diagnostics Reference Also see

Description

Dmatrix(n) returns the $n^2 \times n(n+1)/2$ duplication matrix D for which D*vech(X) = vec(X), where X is an arbitrary $n \times n$ symmetric matrix.

Syntax

real matrix Dmatrix(real scalar n)

Remarks and examples

stata.com

Duplication matrices are frequently used in computing derivatives of functions of symmetric matrices. Section 9.5 of Lütkepohl (1996) lists many useful properties of duplication matrices.

Conformability

```
Dmatrix(n):

n: 1 \times 1

result: n^2 \times n(n+1)/2
```

Diagnostics

Dmatrix(n) aborts with error if n is less than 0 or is missing. n is interpreted as trunc(n).
