

rename — Rename variable

[Description](#)
 [Quick start](#)
 [Menu](#)
 [Syntax](#)
 [Remarks and examples](#)
 [References](#)
[Also see](#)

Description

`rename` changes the name of an existing variable *old_varname* to *new_varname*; the contents of the variable are unchanged. Also see [\[D\] rename group](#) for renaming groups of variables.

Quick start

Change the name of `v1` to `var1`

```
rename v1 var1
```

Also change the name of `v2` to `var2`

```
rename v2 var2
```

Menu

Data > Data utilities > Rename groups of variables

Syntax

```
rename old_varname new_varname
```

Remarks and examples

▶ Example 1

`rename` allows you to change variable names. Say that we have labor market data for siblings.

```
. use http://www.stata-press.com/data/r15/renamexmpl
. describe
```

Contains data from <http://www.stata-press.com/data/r15/renamexmpl.dta>

```
obs:      277
vars:      6                9 Jan 2016 11:57
size:     6,648
```

variable name	storage type	display format	value label	variable label
famid	float	%9.0g		
edu	float	%9.0g		
exp	float	%9.0g		
promo	float	%9.0g		
sex	float	%9.0g	sex	
inc	float	%9.0g		

Sorted by: famid

We decide to rename the `exp` and `inc` variables.

```
. rename exp experience
. rename inc income
. describe
```

```
Contains data from http://www.stata-press.com/data/r15/renamexmpl.dta
  obs:          277
  vars:          6          9 Jan 2016 11:57
  size:         6,648
```

variable name	storage type	display format	value label	variable label
famid	float	%9.0g		
edu	float	%9.0g		
experience	float	%9.0g		
promo	float	%9.0g		
sex	float	%9.0g	sex	
income	float	%9.0g		

```
Sorted by: famid
```

```
Note: Dataset has changed since last saved.
```

The `exp` variable is now called `experience`, and the `inc` variable is now called `income`.
