> **_png␣options_** — Options for exporting to portable network graphics (PNG) format

Description   Syntax   Options   Remarks and examples   Also see

Description

The *png␣options* are used with graph export when creating graphs in PNG format; see [G-2] **graph export**.

Syntax

png␣options	Description
<u>width</u>(#)	width of graph in pixels
<u>heigh</u>t(#)	height of graph in pixels

Options

width(#) specifies the width of the graph in pixels. width() must contain an integer between 8 and 16,000.

height(#) specifies the height of the graph in pixels. height() must contain an integer between 8 and 16,000.

Remarks and examples

Remarks are presented under the following headings:

> *Using png␣options*
> *Specifying the width or height*

Using png␣options

You have drawn a graph and wish to create a PNG file to include in a document. You wish, however, to set the width of the graph to 800 pixels and the height to 600 pixels:

```
. graph ...                                    (draw a graph)
. graph export myfile.png, width(800) height(600)
```

Specifying the width or height

If the width is specified but not the height, Stata determines the appropriate height from the graph's aspect ratio. If the height is specified but not the width, Stata determines the appropriate width from the graph's aspect ratio. If neither the width nor the height is specified, Stata will export the graph on the basis of the current size of the Graph window.
