

intensitystyle — Choices for the intensity of a color

[Description](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

Description

intensitystyles specify the intensity of colors as a percentage from 0 to 100 and are used in *shadestyles*; see [G-4] *shadestyle*.

Syntax

<i>intensitystyle</i>	Description
<i>inten0</i>	0% intensity, no color at all
<i>inten10</i>	
<i>inten20</i>	
...	
<i>inten90</i>	
<i>inten100</i>	100% intensity, full color
<i>#</i>	<i>##%</i> intensity, 0 to 100

Other *intensitystyles* may be available; type

```
. graph query intensitystyle
```

to obtain the complete list of *intensitystyles* installed on your computer. If other *intensitystyles* do exist, they are merely words attached to numeric values.

Remarks and examples

[stata.com](#)

intensitystyle is used primarily in scheme files and is rarely specified interactively, though some options, such as the *intensity()* option, may accept the style names in addition to numeric values.
