isascii( ) — Whether string scalar contains only ASCII codes

Description   Syntax   Conformability   Also see

Description

isascii(*s*) returns 1 if string scalar *s* contains only ASCII codes (0–127) and 0 otherwise.

Syntax

>   *real scalar*   isascii(*string scalar s*)

Conformability

```
isascii(s):
            s:      1 × 1
        result:     1 × 1
```
