

ustrreverse() — Reverse Unicode string

[Description](#)
[Diagnostics](#)
[Syntax](#)
[Also see](#)
[Remarks and examples](#)
[Conformability](#)

Description

`ustrreverse(string matrix s)` reverses the Unicode string *s*.

When arguments are not scalar, this function returns element-by-element results.

Syntax

string matrix `ustrreverse(string matrix s)`

Remarks and examples

[stata.com](#)

The function does not take [Unicode character equivalence](#) into consideration. Hence, a Unicode character in a decomposed form will not be reversed as one unit. An invalid UTF-8 sequence is replaced with a Unicode replacement character `\ufffd`.

Use `strreverse()` to return a string with its bytes in reverse order.

Conformability

`ustrreverse(s)`:

s: $r \times c$
result: $r \times c$

Diagnostics

`ustrreverse(s)` returns an empty string if an error occurs.
