**Syntax**

```
compare varname1 varname2 [if] [in]
```

by is allowed; see [D] by.

**Menu**

Data > Data utilities > Compare two variables

**Description**

`compare` reports the differences and similarities between `varname1` and `varname2`.

**Remarks and examples**

▶ Example 1

One of the more useful accountings made by `compare` is the pattern of missing values:

```
use http://www.stata-press.com/data/r13/fullauto
(Automobile Models)
. compare rep77 rep78
```

<table>
<thead>
<tr>
<th></th>
<th>count</th>
<th>minimum</th>
<th>difference</th>
<th>average</th>
<th>maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>rep77&lt;rep78</td>
<td>16</td>
<td>-3</td>
<td>-1.3125</td>
<td></td>
<td>-1</td>
</tr>
<tr>
<td>rep77=rep78</td>
<td>43</td>
<td>-3</td>
<td>-1.3125</td>
<td></td>
<td>-1</td>
</tr>
<tr>
<td>rep77&gt;rep78</td>
<td>7</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>jointly defined</td>
<td>66</td>
<td>-3</td>
<td>-.2121212</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>rep77 missing only</td>
<td>3</td>
<td>-3</td>
<td>-1.3125</td>
<td></td>
<td>-1</td>
</tr>
<tr>
<td>jointly missing</td>
<td>5</td>
<td>-3</td>
<td>-1.3125</td>
<td></td>
<td>-1</td>
</tr>
<tr>
<td>total</td>
<td>74</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

We see that both `rep77` and `rep78` are missing in 5 observations and that `rep77` is also missing in 3 more observations.
Technical note

`compare` may be used with numeric variables, string variables, or both. When used with string variables, the summary of the differences (minimum, average, maximum) is not reported. When used with string and numeric variables, the breakdown by `<`, `=`, and `>` is also suppressed.
