palette — Display palettes of available selections

Syntax

palette color  colorstyle  [ colorstyle ] [, scheme(schemename)  cmyk ]

palette linepalette [ , scheme(schemename) ]

palette symbolpalette [ , scheme(schemename) ]

Description

palette produces graphs showing various selections available.

palette color shows how a particular color looks and allows you to compare two colors; see [G-4] colorstyle.

palette linepalette shows you the different linepatternstyles; see [G-4] linepatternstyle.

palette symbolpalette shows you the different symbolstyles; see [G-4] symbolstyle.

Options

scheme(schemename) specifies the scheme to be used to draw the graph. With this command, scheme() is rarely specified. We recommend specifying scheme(color) if you plan to print the graph on a color printer; see [G-3] scheme_option.

cmyk specifies that the color value be reported in CMYK rather than in RGB; see [G-4] colorstyle.

Remarks and examples

The palette command is more a part of the documentation of graph than a useful command in its own right.
