Title

nodraw_option — Option for suppressing display of graph

Syntax   Description   Option   Remarks and examples   Also see

Syntax

nodraw_option	Description
nodraw	suppress display of graph

nodraw is *unique*; see [G-4] **concept: repeated options**.

Description

Option nodraw prevents the graph from being displayed. Graphs drawn with nodraw may not be printed or exported, though they may be saved.

Option

nodraw specifies that the graph not be displayed.

Remarks and examples

When you type, for instance,

```
. scatter yvar xvar, saving(mygraph)
```

a graph is displayed and is stored in file mygraph.gph. If you type

```
. scatter yvar xvar, saving(mygraph) nodraw
```

the graph will still be saved in file mygraph.gph, but it will not be displayed. The result is the same as if you typed

```
. set graphics off
. scatter yvar xvar, saving(mygraph)
. set graphics on
```

Here, however, the graph may also be printed or exported.

You need not specify saving() (see [G-3] *saving_option*) to use nodraw. You could type

```
. scatter yvar xvar, nodraw
```

and later type (or code in an ado-file)

```
. graph display Graph
```

See [G-2] **graph display**.
