Description

Added lines are those added by the *added_line_options*. *addedlinestyle* specifies the overall look of those lines. See [G-3] *added_line_options*.

Remarks and examples

stata.com

Remarks are presented under the following headings:

What is an added line? What is an addedlinestyle? You do not need to specify an addedlinestyle

What is an added line?

Added lines are lines added by the *added_line_options* that extend across the plot region and perhaps across the plot region's margins, too.

What is an addedlinestyle?

Added lines are defined by

- 1. whether the lines extend into the plot region's margin;
- 2. the style of the lines, which includes the lines' thickness, color, and whether solid, dashed, etc.; see [G-4] *linestyle*.

The addedlinestyle specifies both these attributes.

You do not need to specify an addedlinestyle

```
The addedlinestyle is specified in the options
```

```
yline(..., style(addedlinestyle) ...) xline(..., style(addedlinestyle) ...)
```

Correspondingly, other yline() and xline() suboptions allow you to specify the individual attributes; see [G-3] *added_line_options*.

You specify the *addedlinestyle* when a style exists that is exactly what you desire or when another style would allow you to specify fewer changes to obtain what you want.
