justificationstyle — Choices for how text is justified

Syntax

<table>
<thead>
<tr>
<th>justificationstyle</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>left</td>
<td>left-justified</td>
</tr>
<tr>
<td>center</td>
<td>centered</td>
</tr>
<tr>
<td>right</td>
<td>right-justified</td>
</tr>
</tbody>
</table>

Other justificationstyles may be available; type

    . graph query justificationstyle

to obtain the complete list of justificationstyles installed on your computer.

Description

justificationstyle specifies how the text is “horizontally” aligned in the textbox. Choices include left, right, and center. Think of the textbox as being horizontal, even if it is vertical when specifying this option.

justificationstyle is specified in the justification() option nested within another option, such as title():

    . graph ... , title("Line 1" "Line 2", justification(justificationstyle)) ... 

See [G-3] textbox_options for more information on textboxes.

Sometimes you will see that a justificationstylelist is allowed. A justificationstylelist is a sequence of justificationstyles separated by spaces. Shorthands are allowed to make specifying the list easier; see [G-4] stylelists.

Remarks and examples

justificationstyle typically affects the alignment of multiline text within a textbox and not the justification of the placement of the textbox itself; see Justification in [G-3] textbox_options.
