

**scheme economist** — Scheme description: economist

[Syntax](#)[Description](#)[Remarks and examples](#)[Also see](#)

## Syntax

<i>schemename</i>	Foreground	Background	Description
<code>economist</code>	color	white	<i>The Economist</i> magazine

For instance, you might type

```
. graph ... , ... scheme(economist)
. set scheme economist [ , permanently ]
```

See [G-3] [scheme\\_option](#) and [G-2] [set scheme](#).

## Description

Schemes determine the overall look of a graph; see [G-4] [schemes intro](#).

Scheme `economist` specifies a look similar to that used by *The Economist* magazine.

## Remarks and examples

stata.com

*The Economist* magazine (<http://www.economist.com>) uses a unique and clean graphics style that is both worthy of emulation and different enough from the usual to provide an excellent example of just how much difference the scheme can make.

Among other things, *The Economist* puts the *y* axis on the right rather than on the left of scatterplots.

For an example, see [Examples of schemes](#) in *Remarks and examples* of [G-4] [schemes intro](#).
