

**statistical** — Statistical functions

[Contents](#)    [Description](#)    [Remarks and examples](#)    [Also see](#)

**Contents**

[M-5] Manual entry	Function	Purpose
<b>Pseudorandom variates</b>		
<b>runiform()</b>	<code>runiform()</code> <code>rseed()</code>	uniform pseudorandom variates obtain or set the random-variate generator seed
	<code>rbeta()</code> <code>rbinomial()</code> <code>rchi2()</code> <code>rdiscrete()</code> <code>rgamma()</code> <code>rhypergeometric()</code> <code>rnbinomial()</code> <code>rnormal()</code> <code>rpoisson()</code> <code>rt()</code>	beta pseudorandom variates binomial pseudorandom variates chi-squared pseudorandom variates discrete pseudorandom variates gamma pseudorandom variates hypergeometric pseudorandom variates negative binomial pseudorandom variates normal (Gaussian) pseudorandom variates Poisson pseudorandom variates Student's <i>t</i> pseudorandom variates
<b>Means, variances, &amp; correlations</b>		
<b>mean()</b>	<code>mean()</code> <code>variance()</code> <code>quadvariance()</code> <code>meanvariance()</code> <code>quadmeanvariance()</code> <code>correlation()</code> <code>quadcorrelation()</code>	mean variance quad-precision variance mean and variance quad-precision mean and variance correlation quad-precision correlation
<b>cross()</b>	<code>cross()</code>	$X'X$ , $X'Z$ , $X'\text{diag}(w)Z$ , etc.
<b>corr()</b>	<code>corr()</code>	make correlation from variance matrix
<b>crossdev()</b>	<code>crossdev()</code>	$(X: -x)'(X: -x)$ , $(X: -x)'(Z: -z)$ , etc.
<b>quadcross()</b>	<code>quadcross()</code> <code>quadcrossdev()</code>	quad-precision <code>cross()</code> quad-precision <code>crossdev()</code>

## 2 statistical — Statistical functions

### Factorial & combinations

<b>factorial()</b>	<b>factorial()</b>	factorial
	<b>lnfactorial()</b>	natural logarithm of factorial
	<b>gamma()</b>	gamma function
	<b>lngamma()</b>	natural logarithm of gamma function
	<b>digamma()</b>	derivative of <code>lngamma()</code>
	<b>trigamma()</b>	second derivative of <code>lngamma()</code>
<b>comb()</b>	<b>comb()</b>	combinatorial function $n$ choose $k$
<b>cvpermute()</b>	<b>cvpermutesetup()</b>	permutation setup
	<b>cvpermute()</b>	return permutations, one at a time

### Densities & distributions

<b>normal()</b>	<b>normalden()</b>	normal density
	<b>normal()</b>	cumulative normal dist.
	<b>invnormal()</b>	inverse cumulative normal
	<b>lnnormalden()</b>	logarithm of the normal density
	<b>lnnormal()</b>	logarithm of the cumulative normal dist.
	<b>binormal()</b>	cumulative binormal dist.
	<b>betaden()</b>	beta density
	<b>ibeta()</b>	cumulative beta dist.; a.k.a. incomplete beta function
	<b>ibetatail()</b>	reverse cumulative beta dist.
	<b>invibeta()</b>	inverse cumulative beta
	<b>invbetatail()</b>	inverse reverse cumulative beta
	<b>binomialp()</b>	binomial probability
	<b>binomial()</b>	cumulative binomial dist.
	<b>binomialtail()</b>	reverse cumulative binomial dist.
	<b>invbinomial()</b>	inverse cumulative binomial
	<b>invbinomialtail()</b>	inverse reverse cumulative binomial
	<b>chi2()</b>	cumulative chi-squared dist.
	<b>chi2den()</b>	chi-squared density
	<b>chi2tail()</b>	reverse cumulative chi-squared dist.
	<b>invchi2()</b>	inverse cumulative chi-squared
	<b>invchi2tail()</b>	inverse reverse cumulative chi-squared
	<b>dunnettprob()</b>	cumulative multiple range dist.; used in Dunnett's multiple comparison
	<b>invdunnettprob()</b>	inverse cumulative multiple range dist.; used in Dunnett's multiple comparison

<b>normal()</b> , <i>continued</i>	<b>Fden()</b>	<i>F</i> density
	<b>F()</b>	cumulative <i>F</i> dist.
	<b>Ftail()</b>	reverse cumulative <i>F</i> dist.
	<b>invF()</b>	inverse cumulative <i>F</i>
	<b>invFtail()</b>	inverse reverse cumulative <i>F</i>
<hr/>		
	<b>gammaden()</b>	gamma density
	<b>gammap()</b>	cumulative gamma dist.; a.k.a. incomplete gamma function
	<b>gammaptail()</b>	reverse cumulative gamma dist.;
	<b>invgammap()</b>	inverse cumulative gamma
	<b>invgammaptail()</b>	inverse reverse cumulative gamma
	<b>dgammapda()</b>	$\partial P(a, x)/\partial a$ , where $P(a, x) = \text{gammap}(a, x)$
	<b>dgammapdx()</b>	$\partial P(a, x)/\partial x$ , where $P(a, x) = \text{gammap}(a, x)$
	<b>dgammapdada()</b>	$\partial^2 P(a, x)/\partial a^2$ , where $P(a, x) = \text{gammap}(a, x)$
	<b>dgammapdadx()</b>	$\partial^2 P(a, x)/\partial a \partial x$ , where $P(a, x) = \text{gammap}(a, x)$
	<b>dgammapdxdx()</b>	$\partial^2 P(a, x)/\partial x^2$ , where $P(a, x) = \text{gammap}(a, x)$
<hr/>		
	<b>hypergeometriccp()</b>	hypergeometric probability
	<b>hypergeometric()</b>	cumulative hypergeometric
<hr/>		
	<b>nbetaden()</b>	noncentral beta density
	<b>nibeta()</b>	cumulative noncentral beta dist.
	<b>invnibeta()</b>	inverse cumulative noncentral beta
<hr/>		
	<b>nbinomialp()</b>	negative binomial probability
	<b>nbinomial()</b>	cumulative negative binomial
	<b>nbinomialtail()</b>	reverse cumulative negative binomial
	<b>invnbinomial()</b>	inverse cumulative negative binomial
	<b>invnbinomialtail()</b>	inverse reverse cumulative negative binomial
<hr/>		
	<b>nchi2()</b>	cumulative noncentral chi-squared dist.
	<b>nchi2den()</b>	noncentral chi-squared density
	<b>nchi2tail()</b>	reverse cumulative noncentral chi-squared dist.
	<b>invnchi2()</b>	inverse cumulative noncentral chi-squared dist.
	<b>invnchi2tail()</b>	inverse reverse cumulative noncentral chi-squared dist.
	<b>npnchi2()</b>	noncentrality parameter of nchi2()
<hr/>		
	<b>nF()</b>	cumulative noncentral <i>F</i> dist.
	<b>nFden()</b>	noncentral <i>F</i> density
	<b>nFtail()</b>	reverse cumulative noncentral <i>F</i> dist.
	<b>invnFtail()</b>	inverse reverse cumulative noncentral <i>F</i>
	<b>npnF()</b>	noncentrality parameter of nF()
<hr/>		

<b>normal()</b> , <i>continued</i>	<code>nt()</code>	cumulative noncentral Student's <i>t</i> dist.
	<code>ntden()</code>	noncentral Student's <i>t</i> density
	<code>nttail()</code>	reverse cumulative noncentral <i>t</i> dist.
	<code>invnttail()</code>	inverse reverse cumulative noncentral <i>t</i>
	<code>npnt()</code>	noncentrality parameter of <code>nt()</code>
<hr/>		
	<code>poissonp()</code>	Poisson probability
	<code>poisson()</code>	cumulative Poisson
	<code>poissontail()</code>	reverse cumulative Poisson
	<code>invpoisson()</code>	inverse cumulative Poisson
	<code>invpoissontail()</code>	inverse reverse cumulative Poisson)
<hr/>		
	<code>t()</code>	Student's <i>t</i> dist.
	<code>tden()</code>	Student's <i>t</i> density
	<code>ttail()</code>	reverse cumulative Student's <i>t</i> dist.
	<code>invt()</code>	inverse cumulative Student's <i>t</i> dist.
	<code>invttail()</code>	inverse reverse cumulative Student's <i>t</i>
<hr/>		
	<code>tukeyprob()</code>	cumulative multiple range dist.;
		used in Tukey's multiple comparison
	<code>invtukeyprob()</code>	inverse cumulative multiple range dist.;
		used in Tukey's multiple comparison

---

**Maximization & minimization**

---

<b>optimize()</b>	<code>optimize()</code>	function maximization and minimization
	<code>optimize_evaluate()</code>	evaluate function at initial values
	<code>optimize_init()</code>	begin optimization
	<code>optimize_init_*</code> ()	set details
	<code>optimize_result_*</code> ()	access results
	<code>optimize_query()</code>	report settings
<hr/>		
<b>moptimize()</b>	<code>moptimize()</code>	function optimization
	<code>moptimize_evaluate()</code>	evaluate function at initial values
	<code>moptimize_init()</code>	begin setup of optimization problem
	<code>moptimize_init_*</code> ()	set details
	<code>moptimize_result_*</code> ()	access <code>moptimize()</code> results
	<code>moptimize_ado_cleanup()</code>	perform cleanup after ado
	<code>moptimize_query()</code>	report settings
	<code>moptimize_util_*</code> ()	utility functions for writing evaluators and processing results

---

**Logits, odds, & related**

---

<b>logit()</b>	<code>logit()</code>	log of the odds ratio
	<code>invlogit()</code>	inverse log of the odds ratio
	<code>cloglog()</code>	complementary log-log
	<code>invcloglog()</code>	inverse complementary log-log

---

Multivariate normal

---

<b>ghk()</b>	ghk() ghk_init() ghk_init_*( ghk() ghk_query_npts()	GHK multivariate normal (MVN) simulator GHK MVN initialization set details perform simulation return number of simulation points
<b>ghkfast()</b>	ghkfast() ghkfast_init() ghkfast_init_*( ghkfast() ghkfast_i() ghk_query_*	GHK MVN simulator GHK MVN initialization set details perform simulation results for the <i>i</i> th observation display settings

---

## Description

The above functions are statistical, probabilistic, or designed to work with data matrices.

## Remarks and examples

[stata.com](http://stata.com)

Concerning data matrices, see

[M-4] **stata**      Stata interface functions

and especially

[M-5] **st\_data()**      Load copy of current Stata dataset

[M-5] **st\_view()**      Make matrix that is a view onto current Stata dataset

For other mathematical functions, see

[M-4] **matrix**      Matrix mathematical functions

[M-4] **scalar**      Scalar mathematical functions

[M-4] **mathematical**      Important mathematical functions

## Also see
