

liststruct() — List structure's contents

[Syntax](#)[Description](#)[Remarks and examples](#)[Conformability](#)[Diagnostics](#)[Also see](#)

Syntax

```
void liststruct(struct whatever matrix x)
```

Description

`liststruct()` lists x 's contents, where x is an instance of structure *whatever*.

Remarks and examples

[stata.com](#)

`liststruct()` is often useful in debugging.

The dimension and type of all elements are listed, and the values of scalars are also shown.

Conformability

```
liststruct( $x$ ):
```

```
     $x$ :       $r \times c$   
    result:  void
```

Diagnostics

None.
