missing( ) — Count missing and nonmissing values

Syntax Description Remarks and examples Conformability
Diagnostics Also see

Syntax

real rowvector	`colmissing(`*numeric matrix X*`)`
real colvector	`rowmissing(`*numeric matrix X*`)`
real scalar	`missing(`*numeric matrix X*`)`
real rowvector	`colnonmissing(`*numeric matrix X*`)`
real colvector	`rownonmissing(`*numeric matrix X*`)`
real scalar	`nonmissing(`*numeric matrix X*`)`
real scalar	`hasmissing(`*numeric matrix X*`)`

Description

These functions return the indicated count of missing or nonmissing values.

`colmissing(`X`)` returns the count of missing values of each column of X, `rowmissing(`X`)` returns the count of missing values of each row, and `missing(`X`)` returns the overall count.

`colnonmissing(`X`)` returns the count of nonmissing values of each column of X, `rownonmissing(`X`)` returns the count of nonmissing values of each row, and `nonmissing(`X`)` returns the overall count.

`hasmissing(`X`)` returns 1 if X has a missing value or 0 if X does not have a missing value.

Remarks and examples

stata.com

```
colnonmissing(X) = rows(X) :- colmissing(X)
rownonmissing(X) = cols(X) :- rowmissing(X)
   nonmissing(X) = rows(X)*cols(X) - missing(X)
```

Conformability

`colmissing(`X`)`, `colnonmissing(`X`)`:
X: $r \times c$
result: $1 \times c$

`rowmissing(`X`)`, `rownonmissing(`X`)`:
X: $r \times c$
result: $r \times 1$

`missing(`*X*`)`, `nonmissing(`*X*`)`, `hasmissing(`*X*`)`:

X:	$r \times c$
result:	1×1

Diagnostics

None.
