

forecast query — Check whether a forecast model has been started

[Syntax](#)[Description](#)[Remarks and examples](#)[Stored results](#)[Also see](#)

Syntax

```
forecast query
```

Description

`forecast query` issues a message indicating whether a forecast model has been started.

Remarks and examples

[stata.com](#)

For an overview of the `forecast` commands, see [\[TS\] forecast](#). This manual entry assumes you have already read that manual entry. `forecast query` allows you to check whether a forecast model has been started. Most users of the `forecast` commands will not need to use `forecast query`. This command is most useful to programmers.

Suppose there is no forecast model in memory:

```
. forecast query
   No forecast model exists.
```

Now we create a forecast model named `fcmodel`:

```
. forecast create fcmodel
   Forecast model fcmodel started.
. forecast query
   Forecast model fcmodel exists.
```

Stored results

`forecast query` stores the following in `r()`:

Scalars

`r(found)` 1 if model started; 0 otherwise

Macros

`r(name)` model name
