

justificationstyle — Choices for how text is justified

[Description](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

Description

justificationstyle specifies how the text is “horizontally” aligned in the textbox. Choices include `left`, `right`, and `center`. Think of the textbox as being horizontal, even if it is vertical when specifying this option.

justificationstyle is specified in the `justification()` option nested within another option, such as `title()`:

```
. graph ..., title("Line 1" "Line 2", justification(justificationstyle)) ...
```

See [G-3] [textbox_options](#) for more information on textboxes.

Sometimes you will see that a *justificationstylelist* is allowed. A *justificationstylelist* is a sequence of *justificationstyles* separated by spaces. Shorthands are allowed to make specifying the list easier; see [G-4] [stylelists](#).

Syntax

<i>justificationstyle</i>	Description
<code>left</code>	left-justified
<code>center</code>	centered
<code>right</code>	right-justified

Other *justificationstyles* may be available; type

```
. graph query justificationstyle
```

to obtain the complete list of *justificationstyles* installed on your computer.

Remarks and examples

stata.com

justificationstyle typically affects the alignment of multiline text within a textbox and not the justification of the placement of the textbox itself; see [Justification](#) in [G-3] [textbox_options](#).
