

**bayesirf ograph** — Overlaid graphs of Bayesian IRF results[Description](#)  
[Options](#)[Quick start](#)  
[Remarks and examples](#)[Menu](#)  
[Stored results](#)[Syntax](#)  
[Also see](#)

## Description

`bayesirf ograph` displays plots of Bayesian impulse–response function (IRF) results on one graph (one pair of axes).

## Quick start

Graph of an orthogonalized IRF `birf` overlaid on cumulative IRF `birf` for dependent variable `y1` and `y2`

```
bayesirf ograph (birf y1 y2 oirf) (birf y1 y2 cirf)
```

Note: `bayesirf` commands can be used after `bayes: var`, `bayes: dsge`, or `bayes: dsge1`; see [\[BAYES\] bayes: var](#), [\[BAYES\] bayes: dsge](#), or [\[BAYES\] bayes: dsge1](#).

## Menu

Statistics > Multivariate time series > Bayesian models > IRF and FEVD analysis

## Syntax

```
bayesirf ograph (spec1) [spec2) ... [spec15) ] ] [, options ]
```

where (*spec*<sub>*k*</sub>) is

```
(irfname impulsevar responsevar stat [, spec_options]) )
```

*irfname* is the name of a set of IRF results in the active IRF file or “.”, which means the first named result in the active IRF file. *impulsevar* should be specified as an endogenous variable for all statistics except *dm* and *cdm*; for those, specify as an exogenous variable. *responsevar* is an endogenous variable name. *stat* is one or more statistics from the list below:

<i>stat</i>	Description
Main	
<i>irf</i>	IRF
<i>oirf</i>	orthogonalized IRF
<i>dm</i>	dynamic-multiplier function
<i>cirf</i>	cumulative IRF
<i>coirf</i>	cumulative orthogonalized IRF
<i>cdm</i>	cumulative dynamic-multiplier function
<i>fevd</i>	Cholesky forecast-error variance decomposition

Note: Only *irf* is available after `bayes: dsge` and `bayes: dsge1`.

<i>options</i>	Description
<i>irf_options</i>	any <i>options</i> documented in [TS] <a href="#">irf ograph</a>
Bayesian	
<i>cri</i>	add credible bands to the graph
<i>clevel</i> (#)	set credible interval level; default is set by <code>bayesirf create</code>
<i>equaltailed</i>	display equal-tailed credible intervals; default is set by <code>bayesirf create</code>
<i>hpd</i>	display HPD credible intervals; default is set by <code>bayesirf create</code>
<i>median</i>	display posterior medians instead of posterior means

CrI plot

```
criopts(area_options) affect rendition of the credible intervals
```

The **CrI plot** tab replaces the **CI plot** tab of [TS] [irf ograph](#).

`collect` is allowed; see [U] [11.1.10 Prefix commands](#).

<i>spec_options</i>	Description
<i>irf_spec_options</i>	any <i>spec_options</i> documented in [TS] <a href="#">irf ograph</a>
Bayesian	
<i>cri</i>	add credible bands to the graph
<i>clevel</i> (#)	set credible interval level; default is set by <code>bayesirf create</code>
<i>equaltailed</i>	display equal-tailed credible intervals; default is set by <code>bayesirf create</code>
<i>hpd</i>	display HPD credible intervals; default is set by <code>bayesirf create</code>
<i>median</i>	display posterior medians instead of posterior means
Crf plot	
<i>criopts</i> ( <i>area_options</i> )	affect rendition of the credible intervals

*spec\_options* may be specified within a graph specification, globally, or in both. When specified in a graph specification, the *spec\_options* affect only the specification in which they are used. When supplied globally, the *spec\_options* affect all graph specifications. When supplied in both places, options in the graph specification take precedence.

## Options

*irf\_options* and *irf\_spec\_options* are any of the *options* and *spec\_options*, respectively, documented in [TS] [irf ograph](#). *level*(#) is a synonym for *clevel*(#), *ci* is a synonym for *cri*, and *criopts*() is a synonym for *criopts*(). Synonymous options do not appear on the dialog box.

### Bayesian

*cri* displays the credible intervals for each statistic. It is implied if *hpd* or *equaltailed* is specified. *clevel*(#), *equaltailed*, and *hpd* affect the calculation of credible intervals. When the specified options do not correspond to the default credible intervals saved in the current IRF file by `bayesirf create`, `bayesirf` will need an IRF MCMC sample to recompute the credible intervals. You can save this sample by specifying option `mcmcsaving()` with `bayesirf create`. Alternatively, if you would like to save the desired credible intervals as the default credible intervals in the current IRF file, you can specify the corresponding options directly with `bayesirf create`. See [Remarks and examples](#) in [BAYES] [bayesirf create](#).

*clevel*(#) specifies the credible level, as a percentage, for equal-tailed and HPD credible intervals.

*equaltailed* displays the equal-tailed credible intervals. *equaltailed* may not be specified with *hpd*.

*hpd* displays the HPD credible intervals. *hpd* may not be specified with *equaltailed*.

*median* displays the posterior medians instead of the default posterior means.

CrI plot

`criopts(are_opts)` affects the rendition of the credible intervals for the plotted statistics; see [G-3] [area\\_opts](#). `criopts()` implies `cri.irf's criopts()` is a synonym for `criopts()`.

The **CrI plot** tab replaces the **CI plot** tab of [TS] [irf ograph](#).

## Remarks and examples

[stata.com](#)

See [TS] [irf ograph](#) for a general discussion about overlaid IRF and other graphs.

Also see [BAYES] [bayesirf graph](#), which produces individual graphs; [BAYES] [bayesirf cgraph](#), which produces combined graphs; and [BAYES] [bayesirf table](#), which displays results in tabular form.

## Stored results

For stored results, see *Stored results* in [TS] [irf ograph](#).
