Subject index

A

adaptive quadrature 124–128
agreement 14
applications
  adolescent-alcohol-use data 99
  antibiotics data 243
  attitudes-to-abortion data 178
  children's growth data 78, 95
  dairy-cow data 139, 245, 246
  diffusion-of-innovations data 96
  epileptic-fit data 212
  essay-grading data 29, 165, 177
  Fife school data 257, 269
  general-health-questionnaire data 26
  Georgian birthweight data 54
  grade-point-average data 52
  Grunfeld investment data 250
  Guatemalan immunization data 229
  headache data 212
  health-care reform data . . 184, 245
  high school and beyond data . . . 55, 97
  inner-London schools data 57, 100
  jaw-growth data 53, 95
  labor-participation data 102
  lip cancer data 197
  math-achievement data 241
  neighborhood-effects data . . 28, 51, 272
  Ohio wheeze data 135
  patent data 213
  peak-expiratory-flow data . . . 1, 26, 219, 246, 248
  rat-pups data 53
applications, *continued*
  respiratory-illness data 175
  schizophrenia trial data 149
  school retention in Thailand data 141
  school-absenteeism data 216
  skin-cancer data 214, 244
  smoking-intervention data 177, 245
  state productivity data 270
  tax-preparer data 31, 51
  toenail infection data 111, 134
  Tower-of-London data 242
  twin-neuroticism data 27
  U.S. production data 242
  unemployment-claims data 98
  union membership data 140
  vaginal-bleeding data 135
  verbal-aggression data 136, 176
  video-ratings data 270
  wage-panel data 54
  women's employment data 138
attrition 185

B

bar plot 113
best linear unbiased predictor 22
between estimator 39–40
binary response . . . . . *see* dichotomous response
binomial distribution 182
bivariate normal distribution 64, 65
BLUP . . . . . *see* best linear unbiased predictor

C

`clogit` option, `or` 131–132

clustered data 1, 217
column name 22
command
`clogit` 131
`describe` 55
`display` 23
`egen` 18, 151, 152, 257, 262
`encode` 219
`eq` 275, 278
`estimates store` 13
`generate` 2
`gllamm` 11–13, 75, 117–118, 275–277, 281–292
`gllapred` 23, 46–47, 76–77, 129, 161, 163, 239, 279–280, 293–296
`gllasim` 297–299
`glm` 106, 149, 189
`graph twoway line` 33
`hausman` 45
`lincom` 43, 156
`logit` 103, 149
`lrtest` 192, 264
`merge` 60
`ologit` 148, 155
`oprobit` 148
`predict` 72, 73, 105, 228
`preserve` 33
`probit` 110, 149
`qnorm` 264
`recode` 150
`regress` 17, 55, 58
`reshape` 9, 33, 218
`restore` 33
`sort` 33
`ssc` 12
`statsby` 59
`summarize` 59
`supclust` 267
`svmat` 18, 210
`table` 151
`tabulate` 17, 258
`test` 43, 172
`twoway function` 71, 105
`use` 2
command, *continued*
`xtdes` 32, 112, 150, 184
`xtgee` 133
`xtmixed` 10, 70
`xtreg` 9, 40
`xtsum` 38
comparative standard error 24
complex level-1 variation 92
conditional independence 7
conditional logistic regression . . 131–132
conditional Poisson regression 196
constant 276
counts 181–216
covariance structure 252
cross-classification 249, 257
cross-level interaction 88, 238
crossed error-components model . . . 252
crossed random effects 249–273
crossover trial 212
cumulative model 143–149

D

diagnostic standard error 25
diagnostics 45–50, 264
dichotomous response 101–142
dropout 185

E

`egen` function
`anymatch()` 152
`group()` 262
`mean()` 18, 151
`tag()` 257
`total()` 257
`egen` option, `by()` 18
elasticity 214
empirical Bayes . . . 19–23, 129–131, 254, 264
variances 24–25
endogeneity 42–45
equation name 22
error components 7–8
exponential family 276
exposure 182

F
fixed effects 5
fixed part 276
fixed-effects estimator 40–41, 131–132, 196

G
gateaux derivative 207
GEE . . . . . *see* generalized estimating equations
generalizability coefficient 272
generalizability theory 249, 271
generalized estimating equations . . 132–133, 197
generalized least squares 42
generalized linear mixed model 116
generalized linear model 101–102, 143–144
`gllamm` options
`adapt` 12, 158, 232
`bmatrix()` 285
`cluster()` 179
`copy` 76, 85, 128
`denom()` 182
`eform` 117, 158, 191, 233
`eqs()` . . 75, 191, 232, 237, 276, 284
`family()` 117, 201, 276, 284
`family(binom)` 117
`from()` 76, 128
`fv()` 284
`gateaux()` 207
`geqs()` 89, 285
`i( )` 231
`i()` 75, 158, 276, 277, 284
`ip()` 285
`ip(f)` 207
`lf0()` 208
`link()` 117, 201, 276, 284
`link(logit)` 117
`link(ologit)` 158
`link(oprobit)` 158, 166
`link(soprobit)` 168
`lv()` 284
`marginal` 280
`nip()` 12, 13, 208, 237
`gllamm` options, *continued*
`noconstant` 89, 94
`nrf()` 75, 237, 276, 277, 284
`offset()` 201
`peqs()` 278, 285
`robust` 193
`s()` 92–94, 100, 168, 247, 285
`skip` 128, 235
`thresh()` . . 170, 172, 175, 278, 285
`us()` 121
`weight()` 28, 128, 141
`gllapred` options
`above()` 161, 163
`fac` 95
`linpred` 77, 92, 279
`marginal` 120, 161
`mu` 120, 121, 130, 161, 163, 204
`nooffset` 204
`pearson` 46
`u` 23, 24, 77, 129, 239, 279
`ustd` 46, 129, 279
`gllasim` options
`fac` 298
`linpred` 298
`mu` 298
`u` 298
`y` 298
GLM . . . . . *see* generalized linear model
`glm` options
`eform` 107, 186
`family()` 106
`link()` 106
`link(logit)` 106
`link(probit)` 107
`scale(x2)` 189
GLMM . . . . . *see* generalized linear mixed model
GLS . . . . . *see* generalized least squares
`graph` option, `by()` 53
`graph twoway` option, `connect(ascending)` . . . 33, 53, 61
growth-curve model 57, 79–87

H
Hausman specification test 44

heteroskedasticity 65, 92, 167
hierarchical data 217
higher-level model 217–248
homoskedasticity 167

I
identification 148–149
incidence-rate ratio 183
intensity 182
intraclass correlation 8, 37, 66, 224–225, 252, 261
inverse link function 102

L
latent response 107–110, 144–147
`lincom` options
  `eform` 156
  `or` 156
linear predictor 102, 276
link function 102, 276
local macro 23
log linear model 182
log link 183
log odds . . . . . *see* logit
logistic regression 102–108
logit link 102
`logit` option, `or` 103–104, 155
`lrtest` option, `force` 192

M
marginal effect 120, 156
marginal probability 113, 120, 161
maximum likelihood 15, 124–128
missing at random 113
missing data 113
MLE . . . . . *see* maximum likelihood

N
nested random effects 217–248
nonparametric maximum likelihood 206–210, 285
nonresponse 185
NPML . . . . *see* nonparametric maximum likelihood

O
odds 102
offset 201, 213
`ologit` options
  `cluster()` 155
  `or` 155
ordinal logit model 143
ordinal probit model 143
ordinal response 143–179
overdispersion 181, 183, 187–190

P
path diagram 6, 7, 223, 224
Poisson distribution 182
Poisson model 182–183
Poisson regression 185–186
population averaged . . . . . *see* marginal probability
posterior distribution 20
posterior variance 24
`predict` options
  `fitted` 73, 91
  `p` 105
  `reffects` 23, 46, 72, 228, 254
  `rstandard` 46
  `xb` 17
prior distribution 19
probit link 102
probit regression 109–111
proportional-odds model 147–148, 154–157

Q
quasilikelihood 183, 188–190

R
random coefficient 276
random effect 5, 276
random interaction 264
random intercept 5, 276
random slope 276
random-coefficient logistic regression 235–240
random-coefficient model 61–68

random-coefficient Poisson regression 193–196
random-coefficient proportional-odds model 159–161
random-intercept logistic regression 116–120, 230–235
random-intercept model 34–36
random-intercept ordinal probit model 165–175
random-intercept Poisson regression 190–193, 201–206
random-intercept proportional-odds model 157–159
reduced form 88
`regress` options
  `cluster()` 34, 55
  `noconstant` 17
  `robust` 55
reliability 8
REML . . . . . *see* restricted maximum likelihood
`reshape` options
  `i()` 218
  `string` 218
residuals 45–50
restricted maximum likelihood 16

S

sandwich estimator 34, 133, 179
scaled probit link 167
scatterplot 58
shrinkage 22
SSC 267
`ssc` option, `replace` 12
standardized mortality ratio 198
subject-specific effect 120
subject-specific probability 161

T

`tabulate` option, `gen()` 17
three-level model 218, 222–240
three-stage formulation 225
two-level model 6, 219–222
two-stage formulation 87
two-way error-components model . . 249, 251–256

U

underdispersion 183
`use` option, `clear` 2

V

variance components 7–8

W

within estimator 40–41

X

`xtgee` option, `eform` 133
`xtmixed` options
  `covariance(exchangeable)` . . 247
  `covariance(identity)` 248
  `covariance(unstructured)` . . . 70, 247
  `mle` 11, 16, 38, 68
  `noconstant` 11, 248
  `reml` 16
  `variance` 11, 226
`xtreg` options
  `be` 40
  `fe` 41
  `i()` 9
  `mle` 9, 16
  `re` 16, 42
