Teach your course with Stata

Spend less time teaching software and more time teaching statistics, data science, econometrics, biostatistics, research methods, and more.

Stata makes course instruction effortless

Point and click

You can access all of Stata's features through the menus and specialized interfaces for data management, creating tables, customizing graphs, and, of course, performing data analysis.

Built-in help system

Forgot the name of an option you want to use? Type **help** followed by the command name to immediately bring up its help file with syntax, examples, and more.

```
. help regress
```

Consistent syntax

Stata's syntax is intuitive and easy to learn and teach. Once you learn the syntax of one estimator or graphics command, you will effortlessly understand the rest.

```
. regress y x1 x2
. logistic y x1 x2
```

Example datasets

All the examples in our help files and documentation rely on datasets that either are installed with Stata or can be downloaded from the Stata website.

Resources for every stage of your course

Ready. Set. Go Stata. webinar

Get your students up and running, with this free webinar tailored specifically for students in the spring and fall.

stata.com/webinars

Introduction to Stata basics

Save valuable lesson planning time with prepared materials on data management, graphics, and regression.

stata.com/stata-basics

Video tutorials

Short, task-based tutorials ideal for teaching. Browse curated playlists or create one tailored to your needs.

stata.com/video-tutorials

Cheat sheets

Compact, well-organized sheets covering everything from basic syntax to plotting and programming.

stata.com/cheat-sheets

Documentation

Comprehensive documentation of methods, formulas, and fully worked examples for each of our features.

stata.com/documentation

Stata Press

Ensure day-one access in your courses with a variety of affordable titles featuring Stata tutorials and examples.

Affordable licensing for you and your students

Email us at **service@stata.com** to find the license that's a perfect fit for your needs.

Individual student
Six-month or one-year licenses at an affordable rate.

Prof+ Plan
Our best pricing for faculty and staff single-user licenses.

Student lab
One-year licenses for concurrent use by students and instructors.

One-week
Instructors can request free short-term licenses.

K–12 and undergraduate
Free licenses for instructors and their students at accredited schools.

Site licenses
Campus- and department-wide licenses for you and your students.

All the tools students need in one platform

No extra modules or hidden costs.

Statistics for every discipline
From introductory to advanced courses, Stata has everything you need to analyze data with confidence.

Visualization
Interactively create publication-quality graphs that export to EPS, PNG, PDF, SVG, or TIF.

Data management
Clean, reshape, and manage your data with ease while maintaining full reproducibility.

Reporting
Generate customizable tables and dynamic reports that export to Word, Excel, PDF, and HTML.

What other instructors have said

NYU

"Stata offers the perfect balance of expert-level capability and user friendliness. In a very short amount of time, students can quickly go from knowing nothing about data analysis to writing simple lines of code for essential descriptive analyses. The intuitiveness of the code syntax, clean formatting of output, and ability to manually edit data visualizations are just three of the many features that make Stata a great choice for anyone looking to start learning how to gain insights from data."

John V. Kane
New York University

TEXAS TECH UNIVERSITY

"Stata is powerful yet versatile statistical software that I have used throughout my career. Perhaps more importantly, it is also incredibly student friendly and a great tool for teaching statistics."

Dennis Patterson
Texas Tech University
