

estat lcmean — Latent class marginal means
[Description](#)[Remarks and examples](#)[Menu for estat](#)[Stored results](#)[Syntax](#)[Also see](#)[Options](#)

Description

`estat lcmean` reports a table of the marginal predicted means of the outcome within each latent class. For `ivregress`, `mlogit`, `oprobit`, and `ologit`, a table is produced for each outcome.

`marginsplot` can be used after `estat lcmean` to plot the marginal predicted means for each class.

Menu for estat

Statistics > Postestimation

Syntax

```
estat lcmean [ , options ]
```

<i>options</i>	Description
<code>nose</code>	do not estimate SEs
<code>post</code>	post margins and their VCE as estimation results
<code>display_options</code>	control column formats, row spacing, and line width

`collect` is allowed; see [U] [11.1.10 Prefix commands](#).

Options

`nose` suppresses calculation of the VCE and standard errors.

`post` causes `estat lcmean` to behave like a Stata estimation (e-class) command. `estat lcmean` posts the vector of estimated margins along with the estimated variance–covariance matrix to `e()`, so you can treat the estimated margins just as you would results from any other estimation command.

`display_options`: `vsquish`, `fvwrap(#)`, `fvwrapon(style)`, `cformat(%fmt)`, `pformat(%fmt)`, `sformat(%fmt)`, and `nolstretch`.

Remarks and examples

[stata.com](#)

`estat lcmean` is illustrated in [\[FMM\] Example 2](#) and [\[FMM\] Example 3](#).

Stored results

`estat lcmean` stores the following in `r()`:

Scalars

`r(N)` number of observations

Macros

`r(title)` title in output

Matrices

`r(b)` estimates

`r(V)` variance–covariance matrix of the estimates

`r(table)` matrix containing the margins with their standard errors, test statistics, *p*-values, and confidence intervals

`estat lcmean` with the `post` option also stores the following in `e()`:

Scalars

`e(N)` number of observations

Macros

`e(title)` title in output

`e(properties)` b V

Matrices

`e(b)` estimates

`e(V)` variance–covariance matrix of the estimates
