graph play — Apply edits from a recording on current graph

Description

graph play applies edits that were previously recorded using the Graph Recorder to the current graph.

Syntax

graph play recordingname

Remarks and examples

Edits made in the Graph Editor (see [G-1] Graph Editor) can be saved as a recording and the edits subsequently played on another graph. In addition to being played from the Graph Editor, these recordings can be played on the currently active graph using the command graph play recordingname.

If you have previously created a recording named xyz, you can replay the edits from that recording on your currently active graph by typing

.graph play xyz

To learn about creating recordings, see Graph Recorder in [G-1] Graph Editor.
