Description

`twoway connected` draws connected-line plots. In a connected-line plot, the markers are displayed and the points are connected.

`connected` is a *plotype* as defined in [G-2] [graph twoway](#). Thus the syntax for `connected` is

```
. graph twoway connected ...
. twoway connected ...
```

Being a plotype, `connected` may be combined with other plotypes in the `twoway` family (see [G-2] [graph twoway](#)), as in,

```
. twoway (connected ...) (scatter ...) (lfit ...) ...
```

Quick start

Connected line plot of `y1` versus `x`

```
twoway connected y1 x
```

Same as above, but sort on `x` before plotting

```
twoway connected y1 x, sort
```

Same as above, but specify small squares as the markers

```
twoway connected y1 x, sort msymbol(s)
```

Add lines for `y2` and `y3`, and use default marker symbols

```
twoway connected y1 y2 y3 x, sort
```

Same as above, with different marker symbols for each set of points

```
twoway connected y1 y2 y3 x, sort msymbol(s d o)
```

Same as above, but use default marker symbols and specify a different style for each line

```
twoway connected y1 y2 y3 x, sort lpattern(longdash dot solid)
```

Menu

Graphics > Two-way graph (scatter, line, etc.)

Syntax

```
twoway connected varlist [if] [in] [weight] [ , scatter_options ]
```

where *varlist* is

$$y_1 [y_2 [\dots]] x$$

*aweight*s, *fweight*s, and *pweight*s are allowed; see [U] 11.1.6 **weight**.

Options

scatter_options are any of the options allowed by the graph twoway scatter command; see [G-2] **graph twoway scatter**.

colorvar_options are not allowed when plotting multiple *ys* against one *x*.

Remarks and examples

`connected` is, in fact, `scatter`, the difference being that by default the points are connected:

Default `connect()` option: `connect(1 ...)`

Thus you get the same results by typing

```
. twoway connected yvar xvar
```

as typing

```
. scatter yvar xvar, connect(1)
```

You can just as easily turn `connected` into `scatter`: Typing

```
. scatter yvar xvar
```

is the same as typing

```
. twoway connected yvar xvar, connect(none)
```
