

set scheme — Set default scheme

Description
References

Quick start
Also see

Syntax

Option

Remarks and examples

Description

`query graphics` shows the graphics settings, which includes the graphics scheme.

`set scheme` allows you to set the graphics scheme to be used. The default setting is `s2color`.

Quick start

Show graphics settings

```
query graphics
```

Set the default graph scheme for the session to that used by the *Stata Journal*

```
set scheme sj
```

As above, and set `sj` as the default scheme in future sessions

```
set scheme sj, permanently
```

Syntax

```
query graphics
```

```
set scheme schemename [, permanently]
```

Option

`permanently` specifies that in addition to making the change right now, the `scheme` setting be remembered and become the default setting when you invoke Stata.

Remarks and examples

stata.com

The graphics scheme specifies the overall look for the graph. You can specify the scheme to be used for an individual graph by specifying the `scheme()` option on the `graph` command, or you can specify the scheme once and for all by using `set scheme`.

See [G-4] **Schemes intro** for a description of schemes and a list of available *schemenames*.

One of the available *schemenames* is `economist`, which roughly corresponds to the style used by *The Economist* magazine. If you wanted to make the `economist` scheme the default for the rest of this session, you could type

```
. set scheme economist
```

and if you wanted to make `economist` your default, even in subsequent sessions, you could type

```
. set scheme economist, permanently
```
