**pr_options** — Options for use with graph print

### Description

The `pr_options` are used with `graph print`; see [G-2] `graph print`.

### Syntax

```
pr_options
```

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>tmargin(#)</code></td>
</tr>
<tr>
<td><code>lmargin(#)</code></td>
</tr>
<tr>
<td>`logo(on</td>
</tr>
</tbody>
</table>

Current default values may be listed by typing

```
 . graph set print
```

The defaults may be changed by typing

```
 . graph set print name value
```

where `name` is the name of a `pr_option`, omitting the parentheses.

### Options

`tmargin(#)` and `lmargin(#)` set the top and left page margins—the distance from the edge of the page to the start of the graph. `#` is specified in inches, must be between 0 and 20, and may be fractional.

`logo(on)` and `logo(off)` specify whether the Stata logo should be included at the bottom of the graph.

### Remarks and examples

Remarks are presented under the following headings:

- Using the `pr_options`
- Setting defaults
- Note for Unix users
Using the `pr_options` 

You have drawn a graph and wish to print it. You wish, however, to suppress the Stata logo (although we cannot imagine why you would want to do that):

```
. graph ...  (draw a graph)
. graph print, logo(off)
```

Setting defaults 

If you always wanted `graph print` to suppress the Stata logo, you could type

```
. graph set print logo off
```

At a future date, you could type

```
. graph set print logo on
```

to set it back. You can determine your default `pr_options` settings by typing

```
. graph set print
```

Note for Unix users 

In addition to the options documented above, there are other options you may specify. Under Stata for Unix, the `pr_options` are in fact `ps_options`; see [G-3] `ps_options`.
