

## Description

The *tif\_options* are used with `graph export` when creating TIFF graphs; see [G-2] [graph export](#).

## Syntax

<i>tif_options</i>	Description
<code>width(#)</code>	width of graph in pixels
<code>height(#)</code>	height of graph in pixels

## Options

`width(#)` specifies the width of the graph in pixels. `width()` must contain an integer between 8 and 16,000.

`height(#)` specifies the height of the graph in pixels. `height()` must contain an integer between 8 and 16,000.

## Remarks and examples

Remarks are presented under the following headings:

*Using tif\_options*

*Specifying the width or height*

### Using tif\_options

You have drawn a graph and wish to create a TIFF file to include in a document. You wish, however, to set the width of the graph to 800 pixels and the height to 600 pixels:

```
. graph ...                               (draw a graph)
. graph export myfile.tif, width(800) height(600)
```

### Specifying the width or height

If the width is specified but not the height, Stata determines the appropriate height from the graph's aspect ratio. If the height is specified but not the width, Stata determines the appropriate width from the graph's aspect ratio. If neither the width nor the height is specified, Stata will export the graph on the basis of the current size of the Graph window.
