

axisstyle — Choices for overall look of axes

[Description](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

Description

Axis styles are used only in scheme files (see `help scheme files`) and are not accessible from `graph` commands. You would rarely want to change axis styles.

axisstyle is a composite style that holds and sets all attributes of an axis, including the look of ticks and tick labels (see [G-4] *ticksetstyle*) for that axis's major and minor labeled ticks and major and minor unlabeled ticks, the axis line style (see [G-4] *linestyle*), rules for whether the axis extends through the plot region margin (both at the low and high end of the scale), whether grids are drawn for each of the labeled and unlabeled major and minor ticks, the gap between the tick labels and axis title, and any extra space beyond the axis title.

Syntax

<i>textstyle</i>	Description
<code>horizontal_default</code>	default standard horizontal axis
<code>horizontal_notick</code>	default horizontal axis without ticks
<code>horizontal_nogrid</code>	default horizontal axis without gridlines
<code>horizontal_withgrid</code>	default horizontal axis with gridlines
<code>horizontal_noline</code>	default horizontal axis without an axis line
<code>horizontal_nolinetick</code>	default horizontal axis with neither an axis line nor ticks
<code>vertical_default</code>	default standard vertical axis
<code>vertical_notick</code>	default vertical axis without ticks
<code>vertical_nogrid</code>	default vertical axis without gridlines
<code>vertical_withgrid</code>	default vertical axis with gridlines
<code>vertical_noline</code>	default vertical axis without an axis line
<code>vertical_nolinetick</code>	default vertical axis with neither an axis line nor ticks

Other *axisstyles* may be available; type

```
. graph query axisstyle
```

to obtain the complete list of *axisstyles* installed on your computer.

Remarks and examples

stata.com

When changing the look of an axis in a scheme file, you would rarely want to change the *axisstyle* entries. Instead, you should change the entries for the individual components making up the axis style.
