

clockposstyle — Choices for location: Direction from central point

[Description](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

Description

clockposstyle specifies a location or a direction.

clockposstyle is specified inside options such as the `position()` *title_option* (see [G-3] [title_options](#)) or the `mlabposition()` *marker_label_option* (see [G-3] [marker_label_options](#)):

```
. graph ..., title(..., position(clockposstyle)) ...
. graph ..., mlabposition(clockposlist) ...
```

In cases where a *clockposlist* is allowed, you may specify a sequence of *clockposstyle* separated by spaces. Shorthands are allowed to make specifying the list easier; see [G-4] [stylelists](#).

Syntax

clockposstyle is

$0 \leq \# \leq 12$, # an integer

Remarks and examples

stata.com

clockposstyle is used to specify a location around a central point:

```
11 12 1
10      2
9    0  3
8      4
7 6 5
```

Sometimes the central position is a well-defined object (for example, for `mlabposition()`, the central point is the marker itself), and sometimes the central position is implied (for example, for `position()`, the central point is the center of the plot region).

clockposstyle 0 is always allowed: it refers to the center.
