justificationstyle — Choices for how text is justified

Description

`justificationstyle` specifies how the text is “horizontally” aligned in the textbox. Choices include `left`, `right`, and `center`. Think of the textbox as being horizontal, even if it is vertical when specifying this option.

`justificationstyle` is specified in the `justification()` option nested within another option, such as `title()`:

```
  . graph ..., title("Line 1" "Line 2", justification(justificationstyle)) ...
```

See [G-3] `textbox_options` for more information on textboxes.

Sometimes you will see that a `justificationstylelist` is allowed. A `justificationstylelist` is a sequence of `justificationstyles` separated by spaces. Shorthands are allowed to make specifying the list easier; see [G-4] `stylelists`.

Syntax

```
  justificationstyle          Description
    left                    left-justified
    center                 centered
    right                  right-justified
```

Other `justificationstyles` may be available; type

```
  . graph query justificationstyle
```

to obtain the complete list of `justificationstyles` installed on your computer.

Remarks and examples

`justificationstyle` typically affects the alignment of multiline text within a textbox and not the justification of the placement of the textbox itself; see `Justification in [G-3] textbox_options`.
