justificationstyle — Choices for how text is justified

Description Syntax Remarks and examples Also see

Description

justificationstyle specifies how the text is "horizontally" aligned in the textbox. Choices include left, right, and center. Think of the textbox as being horizontal, even if it is vertical when specifying this option.

justificationstyle is specified in the justification() option nested within another option, such as title():

```
. graph ..., title("Line 1" "Line 2", justification(justificationstyle)) ...
```

See [G-3] textbox_options for more information on textboxes.

Sometimes you will see that a *justificationstylelist* is allowed. A *justificationstylelist* is a sequence of *justificationstyles* separated by spaces. Shorthands are allowed to make specifying the list easier; see [G-4] *stylelists*.

Syntax

justificationstyle	Description
left	left-justified
center	centered
right	right-justified

Other *justificationstyles* may be available; type

. graph query justificationstyle

to obtain the complete list of justificationstyles installed on your computer.

Remarks and examples

stata.com

justificationstyle typically affects the alignment of multiline text within a textbox and not the justification of the placement of the textbox itself; see Justification in [G-3] textbox_options.
