Scheme sj — Scheme description: sj

Description

Schemes determine the overall look of a graph; see [G-4] Schemes intro.
Scheme sj is the official scheme of the Stata Journal; see [R] sj.

Syntax

<table>
<thead>
<tr>
<th>schemename</th>
<th>Foreground</th>
<th>Background</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sj</td>
<td>monochrome</td>
<td>white</td>
<td>Stata Journal</td>
</tr>
</tbody>
</table>

For instance, you might type

```
. graph ..., ... scheme(sj)
. set scheme sj [, permanently ]
```

Remarks and examples

When submitting articles to the Stata Journal, graphs should be drawn using the scheme sj.

Before drawing graphs for inclusion with submissions, make sure that scheme sj is up to date. Schemes are updated along with all the rest of Stata, so you just need to type

```
. update query
```

and follow any instructions given; see [R] update.

Also visit the Stata Journal website for any special instructions. Point your browser to https://www.stata-journal.com.

For an example, see Examples of schemes in Remarks and examples of [G-4] Schemes intro.
