

mata help — Obtain help in Stata

[Description](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

Description

`mata help` is Stata's help command. Thus you do not have to exit Mata to use help.

Syntax

```
: mata help ...
```

```
: help ...
```

`help` need not be preceded by `mata`.

Remarks and examples

stata.com

See [\[M-1\] help](#).

You need not type the Mata prefix:

```
: mata help mata
(output appears in Stata's Viewer)
: help mata
(same result)
```

`help` can be used to obtain help for Mata or Stata:

```
: help mata missing()
: help missing()
```
