

manipulation — Matrix manipulation

[Contents](#)[Description](#)[Remarks and examples](#)[Also see](#)**Contents**

[M-5] Manual entry	Function	Purpose
Transposition		
transposeonly()	transposeonly()	transposition without conjugation
_transpose()	_transpose()	transposition in place
Diagonals		
diag()	diag()	create diagonal matrix from vector
_diag()	_diag()	replace diagonal of matrix
diagonal()	diagonal()	extract diagonal of matrix into vector
Triangular & symmetric		
lowertriangle()	lowertriangle()	extract lower triangle
	uppertriangle()	extract upper triangle
sublowertriangle()	sublowertriangle()	generalized lowertriangle()
makesymmetric()	makesymmetric()	make matrix symmetric (Hermitian)
Sorting		
sort()	sort()	sort rows of matrix
	jumble()	randomize order of rows of matrix
	order()	permutation vector for ordered rows
	unorder()	permutation vector for randomized rows
	_collate()	order matrix on permutation vector
uniqrows()	uniqrows()	sorted, unique rows

Editing

_fillmissing()	<code>_fillmissing()</code>	change matrix to contain missing values
editmissing()	<code>editmissing()</code>	replace missing values in matrix
editvalue()	<code>editvalue()</code>	replace values in matrix
edittozero()	<code>edittozero()</code> <code>edittozerotol()</code>	edit matrix for roundoff error (zeros) same, absolute tolerance
edittoint()	<code>edittoint()</code> <code>edittointtol()</code>	edit matrix for roundoff error (integers) same, absolute tolerance

Permutation vectors

invorder()	<code>invorder()</code> <code>revorder()</code>	inverse of permutation vector reverse of permutation vector
----------------------------	--	--

Matrices into vectors & vice versa

vec()	<code>vec()</code> <code>vech()</code> <code>invvech()</code>	convert matrix into column vector convert symmetric matrix into column vector convert column vector into symmetric matrix
rowshape()	<code>rowshape()</code> <code>colshape()</code>	reshape matrix to have <i>r</i> rows reshape matrix to have <i>c</i> columns

Associative arrays

asarray()	<code>asarray()</code> <code>asarray_*</code>	store or retrieve element in array utility routines
---------------------------	--	--

Description

The above functions manipulate matrices, such as extracting the diagonal and sorting.

Remarks and examples

[stata.com](http://www.stata.com)

There is a thin line between manipulation and utility; also see

[M-4] [utility](#) Matrix utility functions
