

designmatrix() — Design matrices

Description
Diagnostics

Syntax
Also see

Remarks and examples

Conformability

Description

`designmatrix(v)` returns a $\text{rows}(\mathit{v}) \times \text{colmax}(\mathit{v})$ matrix with ones in the indicated columns and zero everywhere else.

Syntax

real matrix `designmatrix(real colvector v)`

Remarks and examples

stata.com

`designmatrix((1\2\3))` is equal to $I(3)$, the 3×3 identity matrix.

Conformability

`designmatrix(v):`

v: $r \times 1$
result: $r \times \text{colmax}(\mathit{v})$ (0×0 if $r = 0$)

Diagnostics

`designmatrix(v)` aborts with error if any element of *v* is < 1 .
