

direxternal() — Obtain list of existing external globals

Description
Diagnostics

Syntax
Also see

Remarks and examples

Conformability

Description

`direxternal(pattern)` returns a column vector containing the names matching *pattern* of the existing external globals. `direxternal()` returns `J(0,1,"")` if there are no such globals.

pattern is interpreted by [M-5] `strmatch()`.

Syntax

string colvector `direxternal(string scalar pattern)`

Remarks and examples

stata.com

See [M-5] `findexternal()` for the definition of a global.

A list of all globals can be obtained by `direxternal("*")`.

Conformability

`direxternal(pattern):`

pattern: 1×1
result: $n \times 1$

Diagnostics

`direxternal(pattern)` returns `J(0,1,"")` when there are no globals matching *pattern*.
