

isascii() — Whether string scalar contains only ASCII codes

[Description](#)[Syntax](#)[Conformability](#)[Also see](#)

Description

`isascii(s)` returns 1 if string scalar *s* contains only ASCII codes (0–127) and 0 otherwise.

Syntax

real scalar `isascii(string scalar s)`

Conformability

```
isascii(s):  
  s:      1 × 1  
  result: 1 × 1
```
