

**isrealvalues()** — Whether matrix contains only real values

[Description](#)  
[Diagnostics](#)

[Syntax](#)  
[Also see](#)

[Remarks and examples](#)

[Conformability](#)

## Description

`isrealvalues(X)` returns 1 if  $X$  is of storage type real or if  $X$  is of storage type complex and all elements are real or missing; 0 is returned otherwise.

## Syntax

*real scalar* `isrealvalues(numeric matrix X)`

## Remarks and examples

[stata.com](#)

`isrealvalues(X)` is logically equivalent to `X==Re(X)` but is significantly faster and requires less memory.

## Conformability

`isrealvalues(X)`:

*X*:  $r \times c$   
*result*:  $1 \times 1$

## Diagnostics

`isrealvalues(X)` returns 1 if  $X$  is void and complex.
