**Description**

`st_rclear()` clears Stata’s `r()` stored results.

`st_eclear()` clears Stata’s `e()` stored results.

`st_sclear()` clears Stata’s `s()` stored results.

**Syntax**

```plaintext
void st_rclear()

void st_eclear()

void st_sclear()
```

**Remarks and examples**

Returning results in `r()`, `e()`, or `s()` is one way of communicating results calculated in Mata back to Stata; see [M-1] Ado. See [R] Stored results for a description of `e()`, `r()`, and `s()`.

Use `st_rclear()`, `st_eclear()`, or `st_sclear()` to clear results, and then use `st_global()` to define macros, `st_numscalar()` to define scalars, and `st_matrix()` to define Stata matrices in `r()`, `e()`, or `s()`. For example,

```plaintext
st_rclear()

st_global("r(name)", "tab")  see [M-5] st_global()

st_numscalar("r(N)", n1+n2) see [M-5] st_numscalar()

st_matrix("r(table)", X+Y)  see [M-5] st_matrix()
```

It is not necessary to clear before saving, but it is considered good style unless it is your intention to add to previously stored results.

If a stored result already exists, `st_global()`, `st_numscalar()`, and `st_matrix()` may be used to redefine it and even to redefine it to a different type. For instance, continuing with our example, later in the same code might appear

```plaintext
if (...) {
       st_matrix("r(name)", X)
}
```
Stored result \texttt{r(name)} was previously defined as a macro containing "tab", and, even so, can now be redefined to become a matrix.

If you want to eliminate a particular stored result, use \texttt{st_global()} to change its contents to "$":

\begin{verbatim}
    st_global("r(name)", "")
\end{verbatim}

Do this regardless of the type of the stored result. Here we use \texttt{st_global()} to clear stored result \texttt{r(name)}, which might be a macro and might be a matrix.

**Conformability**

\texttt{st_rclear()}, \texttt{st_eclear()}, and \texttt{st_sclear()} take no arguments and return void.

**Diagnostics**

\texttt{st_rclear()}, \texttt{st_eclear()}, and \texttt{st_sclear()} cannot fail.
