Description

`st_varrename(var, newname)` changes the name of `var` to `newname`.

If `var` is specified as a name, abbreviations are not allowed.

Syntax

```plaintext
void st_varrename(scalar var, string scalar newname)
```

where `var` contains a Stata variable name or a Stata variable index.

Conformability

```plaintext
st_varrename(var, newname):
  var: 1 × 1
  newname: 1 × 1
  result: void
```

Diagnostics

`st_varrename(var, newname)` aborts with error if `var` is not a valid Stata variable or if `newname` is not a valid name or if a variable named `newname` already exists.
