

Description

`strreverse(s)` reverses the ASCII string *s*.

When *s* is not a scalar, `strreverse()` returns element-by-element results.

Syntax

string matrix `strreverse(string matrix s)`

Remarks and examples

`strreverse()` is intended for use with ASCII characters. For Unicode characters beyond the ASCII range, the encoded bytes are reversed.

Use `ustrreverse()` to return a string with its Unicode characters in reverse order.

Conformability

<code>strreverse(s)</code>	
<i>s</i> :	$r \times c$
<i>result</i> :	$r \times c$

Diagnostics

None.
