mi export — Export mi data

Description

Use `mi export nhanes1` to export data in the format used by the National Health and Nutrition Examination Survey.

Use `mi export ice` to export data in the format used by `ice` (Royston 2004, 2005a, 2005b, 2007, 2009).

If and when other standards develop for recording multiple-imputation data, other `mi export` subcommands will be added.

Syntax

```
mi export nhanes1 ...
mi export ice ...
```

See [MI] `mi export nhanes1` and [MI] `mi export ice`.

Remarks and examples

If you wish to send data to other Stata users, ignore `mi export` and just send them your `mi` dataset(s).

To send data to users of other packages, however, you will have to negotiate the format you will use. The easiest way to send data to non–Stata users is probably to `mi convert` (see [MI] `mi convert`) your data to `flongsep` and then use `outfile` (see [D] `outfile`) or `export delimited` (see [D] `import delimited`). Also see [U] 22 Entering and importing data.
