Description

This entry provides a quick reference for how to specify comments in programs. See [U] 16.1.2 Comments and blank lines in do-files for more details.

Remarks and examples

Comments may be added to programs in three ways:

- begin the line with `*`;
- begin the comment with `//`; or
- place the comment between `/*` and `*/` delimiters.

Here are examples of each:

```stata
* a sample analysis job
version 16.1
use census
/* obtain the summary statistics */
tabulate region  // there are 4 regions in this dataset
summarize marriage

* a sample analysis job
version 16.1
use /* obtain the summary statistics */ census
tabulate region
// there are 4 regions in this dataset
summarize marriage
```

The comment indicator `*` may be used only at the beginning of a line, but it does have the advantage that it can be used interactively. `*` indicates that the line is to be ignored. The `*` comment indicator may not be used within Mata.

The `//` comment indicator may be used at the beginning or at the end of a line. However, if the `//` indicator is at the end of a line, it must be preceded by one or more blanks. That is, you cannot type the following:

```
tabulate region// there are 4 regions in this dataset
```

`//` indicates that the rest of the line is to be ignored.

The `/*` and `*/` comment delimiter has the advantage that it may be used in the middle of a line, but it is more cumbersome to type than the other two comment indicators. What appears inside `/*` `*/` is ignored.
Technical note

There is a fourth comment indicator, ///, that instructs Stata to view from /// to the end of a line as a comment and to join the next line with the current line. For example,

```stata
args a /// input parameter for a
    b /// input parameter for b
    c // input parameter for c
```

is equivalent to

```stata
args a b c
```

/// is one way to make long lines more readable:

```stata
replace final_result = ///
    sqrt(first_side^2 + second_side^2) ///
    if type == "rectangle"
```

Another popular method is

```stata
replace final_result = /*
    */ sqrt(first_side^2 + second_side^2) /*
    */ if type == "rectangle"
```

Like the // comment indicator, the /// indicator must be preceded by one or more blanks.
