

docx2pdf — Convert a Word (.docx) document to a PDF file

[Description](#) [Quick start](#) [Syntax](#) [Options](#)
[Remarks and examples](#) [Also see](#)

Description

`docx2pdf` converts a Word (.docx) document to a PDF file.

Quick start

Convert Word document `myfile.docx` to a PDF saved as `myfile.pdf`
`docx2pdf myfile`

As above, but save the PDF as `mypdf.pdf`
`docx2pdf myfile, saving(mypdf)`

As above, and overwrite the existing `mypdf.pdf`
`docx2pdf myfile, saving(mypdf) replace`

Syntax

```
docx2pdf srcfile [ , options ]
```

srcfile is a .docx file. If *srcfile* is specified without an extension, .docx is assumed. If *srcfile* contains embedded spaces or other special characters, enclose it in double quotes.

<i>options</i>	Description
<code>saving(<i>targetfile</i>)</code>	specify the target PDF file to be saved
<code>replace</code>	replace the target PDF file if it already exists
<code>nomsg</code>	suppress message with link to <i>targetfile</i>

Options

`saving(targetfile)` specifies the target PDF file to be saved. If *targetfile* is specified without an extension, .pdf is assumed. If *targetfile* contains embedded spaces or other special characters, enclose it in double quotes. If `saving()` is not specified, the target filename is constructed using the source filename (*srcfile*) with the .pdf extension.

`replace` specifies that the target PDF file be replaced if it already exists.

`nomsg` suppresses the message that contains a link to the target file.

Remarks and examples

docx2pdf converts Word (.docx) documents to PDF files. This command is most useful when you want to convert an HTML file to a PDF file; in this case, you would first use [html2docx](#) to convert the HTML file to a Word document and then use docx2pdf to convert it to a PDF file. If you would like to convert a dynamic Markdown document to a PDF file, you can use [dyndoc](#) to create a Word document and then use docx2pdf to convert that Word document to a PDF file.

If you are wanting to embed Stata results and graphs in a PDF file, you can also use the putpdf suite; see [\[RPT\] putpdf intro](#).

► Example 1: Convert Word document to a PDF file

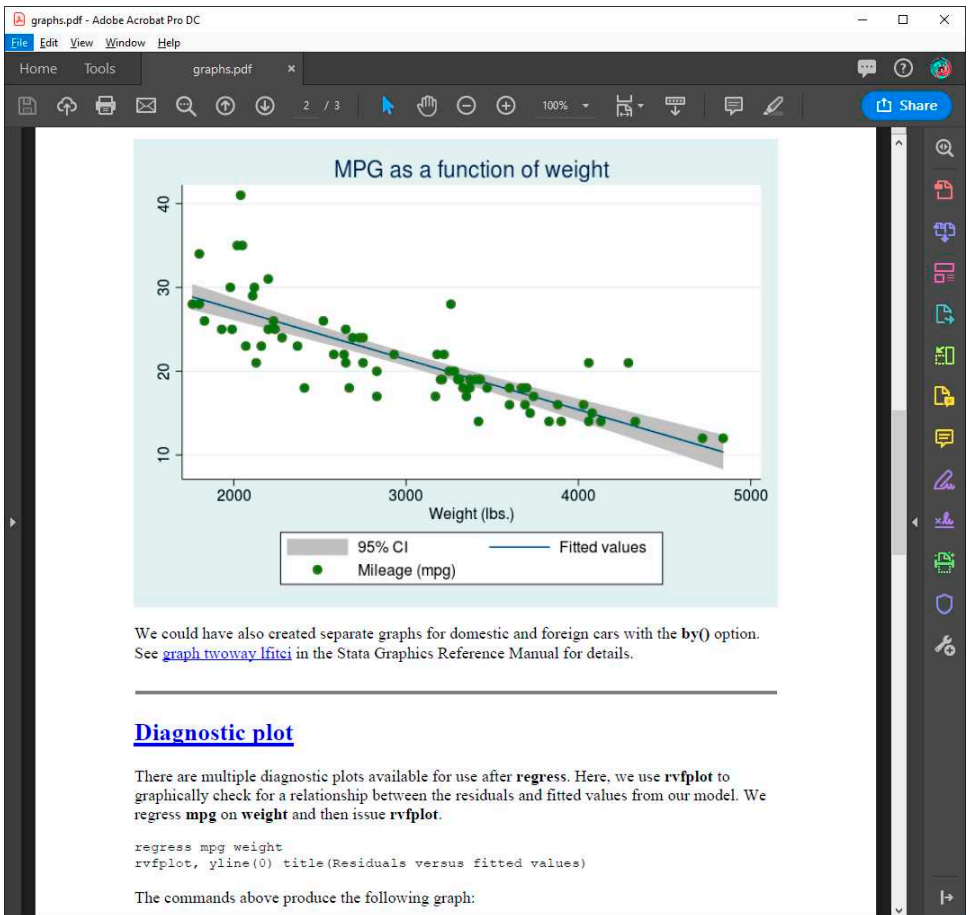

We have a Word document, `graphs.docx`, which you can download to your current working directory by typing

```
. copy http://www.stata-press.com/data/r17/reporting/graphs.docx .
```

To convert this file to a PDF file, we type

```
. docx2pdf graphs.docx
```

Because we did not specify a filename for our target file, the source filename was used with the .pdf extension. Thus, the file `graphs.pdf` was saved. Here is a portion of this file:

You can see the whole file at <http://www.stata-press.com/data/r17/reporting/graphs.pdf>.
