## Description

`estat scoretests` is for use after `sem` but not `gsem`.

`estat scoretests` displays score tests (Lagrange multiplier tests) for each of the user-specified linear constraints imposed on the model when it was fit. See [Sörbom \(1989\)](#) and [Wooldridge \(2010, 421–428\)](#).

## Menu

Statistics > SEM (structural equation modeling) > Testing and CIs > Score tests of linear constraints

## Syntax

```
estat scoretests [ , minchi2(#) ]
```

`collect` is allowed; see [\[U\] 11.1.10 Prefix commands](#).

## Option

`minchi2(#)` suppresses output of tests with  $\chi^2(1) < \#$ . By default, `estat mindices` lists values significant at the 0.05 level, corresponding to  $\chi^2(1)$  value `minchi2(3.8414588)`. Specify `minchi2(0)` if you wish to see all tests.

## Remarks and examples

See [\[SEM\] Example 8](#).

## Stored results

`estat scoretests` stores the following in `r()`:

### Scalars

<code>r(N_groups)</code>	number of groups
--------------------------	------------------

### Matrices

<code>r(nobs)</code>	sample size for each group
<code>r(Cns_sctest)</code>	matrix containing the displayed table values
