

Description

`spmatrix import` reads files created by `spmatrix export`.

Quick start

Create spatial weighting matrix `Wme` by importing file `wmat.txt`

```
spmatrix import Wme using wmat.txt
```

Menu

Statistics > Spatial autoregressive models

Syntax

```
spmatrix import spmatname using filename [ , replace ]
```

spmatname will be the name of the weighting matrix that is created.

filename is the name of a file with or without the default `.txt` suffix.

Option

`replace` specifies that weighting matrix *spmatname* in memory be overwritten if it already exists.

Remarks and examples

`spmatrix import` reads files written in a particular text-file format. The format is described in [\[SP\] spmatrix export](#). Such a file might be named `contig.txt`. To read the file and store the matrix in Sp spatial weighting matrix `Wcontig`, type

```
. spmatrix import Wcontig using contig.txt
```

or

```
. spmatrix import Wcontig using contig
```

The file extension `.txt` is assumed.

The file is read and stored as is. Presumably, the user who created the matrix normalized it, but if not, you can normalize it by typing

```
. spmatrix normalize Wcontig
```

By default, `spmatrix normalize` uses spectral normalization, but you can specify a different normalization using the `normalize()` option. See [\[SP\] spmatrix normalize](#).
