This manual documents commands for survival analysis and is referred to as [ST] in cross-references. Following this entry, [ST] **Survival analysis** provides an overview of the commands.

This manual is arranged alphabetically. If you are new to Stata’s survival analysis, we recommend that you read the following sections first:

- **[ST] Survival analysis** Introduction to survival analysis
- **[ST] st** Survival-time data
- **[ST] stset** Set variables for survival data

Stata is continually being updated, and Stata users are always writing new commands. To find out about the latest survival analysis features, type `search survival` after installing the latest official updates; see [R] **update**.
