Introduction to survival analysis manual

This manual documents commands for survival analysis and is referred to as [ST] in cross-references. Following this entry, [ST] Survival analysis provides an overview of the commands.

This manual is arranged alphabetically. If you are new to Stata’s survival analysis, we recommend that you read the following sections first:

- [ST] Survival analysis: Introduction to survival analysis commands
- [ST] st: Survival-time data
- [ST] stset: Set variables for survival data

Stata is continually being updated, and Stata users are always writing new commands. To find out about the latest survival analysis features, type `search survival` after installing the latest official updates; see [R] update.
