

**xtline** — Panel-data line plots[Description](#)[Syntax](#)[Remarks and examples](#)[Quick start](#)[Options for graph by panel](#)[Also see](#)[Menu](#)[Options for overlaid panels](#)

## Description

`xtline` draws line plots for panel data.

## Quick start

Matrix of line plots of `y` against time variable `tvar` with panel identifier `pvar`

```
xtline y, i(pvar) t(tvar)
```

Same as above, but using `xtset` data

```
xtline y
```

As above, but overlay line plots for each panel identifier `pvar`

```
xtline y, overlay
```

Add “My Title” to graph showing a matrix of line plots

```
xtline y, byopts(title(My Title))
```

Add “My Title” to graph of overlaid line plots

```
xtline y, overlay title(My Title)
```

## Menu

Statistics > Longitudinal/panel data > Line plots

## Syntax

Graph by panel

```
xtline varlist [if] [in] [, panel_options]
```

Overlaid panels

```
xtline varname [if] [in], overlay [overlaid_options]
```

<i>panel_options</i>	Description
Main	
<i>i</i> ( <i>varname<sub>i</sub></i> )	use <i>varname<sub>i</sub></i> as the panel ID variable
<i>t</i> ( <i>varname<sub>t</sub></i> )	use <i>varname<sub>t</sub></i> as the time variable
Plot	
<i>cline_options</i>	affect rendition of the plotted points connected by lines
Add plots	
<code>addplot(<i>plot</i>)</code>	add other plots to the generated graph
Y axis, Time axis, Titles, Legend, Overall	
<i>twoway_options</i>	any options other than <code>by()</code> documented in [G-3] <i>twoway_options</i>
<code>byopts(<i>byopts</i>)</code>	affect appearance of the combined graph

<i>overlaid_options</i>	Description
Main	
<code>overlay</code>	overlay each panel on the same graph
<i>i</i> ( <i>varname<sub>i</sub></i> )	use <i>varname<sub>i</sub></i> as the panel ID variable
<i>t</i> ( <i>varname<sub>t</sub></i> )	use <i>varname<sub>t</sub></i> as the time variable
Plots	
<code>plot#opts(<i>cline_options</i>)</code>	affect rendition of the # panel line
Add plots	
<code>addplot(<i>plot</i>)</code>	add other plots to the generated graph
Y axis, Time axis, Titles, Legend, Overall	
<i>twoway_options</i>	any options other than <code>by()</code> documented in [G-3] <i>twoway_options</i>

A panel variable and a time variable must be specified. Use `xtset` (see [XT] `xtset`) or specify the `i()` and `t()` options. The `t()` option allows noninteger values for the time variable, whereas `xtset` does not.

## Options for graph by panel

### Main

$i$  ( $varname_i$ ) and  $t$  ( $varname_t$ ) override the panel settings from `xtset`; see [XT] `xtset`.  $varname_i$  is allowed to be a string variable.  $varname_t$  can take on noninteger values and have repeated values within panel. That is to say, it can be any numeric variable that you would like to specify for the  $x$ -dimension of the graph. It is an error to specify `i()` without `t()` and vice versa.

### Plot

`cline_options` affect the rendition of the plotted points connected by lines; see [G-3] `cline_options`.

### Add plots

`addplot(plot)` provides a way to add other plots to the generated graph; see [G-3] `addplot_option`.

### Y axis, Time axis, Titles, Legend, Overall

`twoway_options` are any of the options documented in [G-3] `twoway_options`, excluding `by()`. These include options for titling the graph (see [G-3] `title_options`) and for saving the graph to disk (see [G-3] `saving_option`).

`byopts(byopts)` allows all the options documented in [G-3] `by_option`. These options affect the appearance of the `by`-graph. `byopts()` may not be combined with `overlay`.

## Options for overlaid panels

### Main

`overlay` causes the plot from each panel to be overlaid on the same graph. The default is to generate plots by panel. This option may not be combined with `byopts()` or be specified when there are multiple variables in `varlist`.

$i$  ( $varname_i$ ) and  $t$  ( $varname_t$ ) override the panel settings from `xtset`; see [XT] `xtset`.  $varname_i$  is allowed to be a string variable.  $varname_t$  can take on noninteger values and have repeated values within panel. That is to say, it can be any numeric variable that you would like to specify for the  $x$ -dimension of the graph. It is an error to specify `i()` without `t()` and vice versa.

### Plots

`plot#opts(cline_options)` affect the rendition of the  $\#$ th panel (in sorted order). The `cline_options` can affect whether and how the points are connected; see [G-3] `cline_options`.

### Add plots

`addplot(plot)` provides a way to add other plots to the generated graph; see [G-3] `addplot_option`.

### Y axis, Time axis, Titles, Legend, Overall

`twoway_options` are any of the options documented in [G-3] `twoway_options`, excluding `by()`. These include options for titling the graph (see [G-3] `title_options`) and for saving the graph to disk (see [G-3] `saving_option`).

## Remarks and examples

### ► Example 1

Suppose that Tess, Sam, and Arnold kept a calorie log for an entire calendar year. At the end of the year, if they pooled their data together, they would have a dataset (for example, `xtline1.dta`) that contains the number of calories each of them consumed for 365 days. They could then use `xtset` to identify the date variable and treat each person as a panel and use `xtline` to plot the calories versus time for each person separately.

```
. use http://www.stata-press.com/data/r15/xtline1
. xtset person day
    panel variable:  person (strongly balanced)
    time variable:  day, 01jan2002 to 31dec2002
                   delta: 1 day
. xtline calories, tlabel(#3)
```

Specify the `overlay` option so that the values are plotted on the same graph to provide a better comparison among Tess, Sam, and Arnold.

```
. xtline calories, overlay
```
